Columbus McKinnon Corporation has a rich tradition of providing quality products and services to meet the needs of users in a variety of industries around the globe which continues with an expanded line of chain and attachments by CM. Used by professional riggers, maintenance workers, plant engineers and safety specialists to lift, pull, and secure loads, the broad product offering allows users to select the proper product for everyday use or for those challenging, unique applications which arise during the course of a project. An integral part of a lifting system, CM chain and attachments come in a wide range of configurations and capacities.

Our broad product offering is one advantage CM has over the competition, complemented by:

- A thoroughly trained and knowledgeable technical sales force providing expertise on applications, regulations, training requirements, and product features and benefits.
- A global network of authorized distributors providing inventory, technical support, service after the sale, and consultation regarding specific needs.
- Knowledgeable customer service representatives addressing an array of issues related to shipments, product selection, specifications, and auxiliary items.
- World-class, global manufacturing facilities performing product testing which exceeds the standards outlined by industry regulations.
- An engineering team working to improve existing products, while developing unique and innovative new products.
- Training programs dedicated specifically to rigging products, as well as broad-based programs to cover all aspects of lifting and positioning.
- The ONLY manufacturer of rigging products that is also a LEADER in the design and manufacturing of hoists, overhead cranes, and related products.
- More than 130 years of experience in providing products and services that exceed the expectations of customers.
- Some of the most recognized names in the material handling industry including the following that are registered in the U.S. Patent and Trademark Office: Big Orange, Clevlok, CM, Cradle Grab, E-Z Pro, Hammerlok, Herc-Alloy, Lister, PiggyBack, Latchlok. Additionally, Cady and Dixie are trademarks of Columbus McKinnon Corporation.

Warning

Columbus McKinnon Corporation assumes no responsibility for the misuse or misapplication of any of its products. Products are provided with the express understanding that the purchaser and user are thoroughly familiar with the correct application and proper use of such products in rigging.

⚠ WARNING ⚠

Improper use or care of chain can result in loss of load and/or personal injury

To avoid injury:

- Do not exceed the working load limit.
- Always inspect chain before use for wear, damage, and elongation, Do not impact load or jerk chain. Apply load slowly.
- Protect chain from corrosion and high temperatures.
- Use only alloy chain and attachments for overhead lifting.
- Do not use twisted, knotted, or kinked chain.
- Select the proper grade and size chain for the application.
- Select attachments such as hooks to match the grade, size, and working load limit of the chain.
- Be aware of the environment where chain and hardware are being used. Extreme temperatures and corrosive media can affect the working load limit life of chain and hardware.

⚠ WARNING ⚠

Improper use of rigging attachments can result in bodily injury or property damage

To avoid injury:

- Do not exceed the working load limit.
- Do not tip load or use attachments in any manner for which they were not intended.
- Do not shock or dynamic load.
- Do not apply load to latches. Latches are to retain slack slings and chain only.
- Select attachments to match the grade, size, and working load limit of the chain.
- Do not use excessively worn or damaged attachments.
- Do not use mechanical coupling links to repair alloy chains used for overhead lifting.
- When using master rings or master links, do not use oversize crane hooks where the link does not fit in the saddle of the hook.
- When using shackles, do not side load. Centerline of the load must coincide with centerline of shackle.
- Do not replace pins or bolts with other than original equipment parts.
- Use only forged carbon wire rope clips for critical or lifting applications.
- Do not use malleable iron wire rope clips for critical or lifting applications.
- Use wire rope clips in conjunction with wire rope thimbles.
- When using shoulder eyebolts, always apply load in the plane of the eye.
- When using shoulder eyebolts, make sure shoulder is at 90 degrees to axis of hole and seated.
- When using hoist rings, verify full 360 degree seating and re-torque periodically.
- Do not move unbalanced loads.
- When using load binders, do not use a cheater bar or handle extension.
- Do not operate a load binder while anyone is on the load.
- Release lever type load binders with extreme care. Make sure everyone is clear of the load as handle may whip suddenly.

**For complete care, use, and inspection information, refer to the
“CM Lifting, Pulling, & Binding Products Manual #PMC-10.**

Shackles

CM Super Strong Anchor Shackles

Screw Pin

Round Pin

Bolt & Nut

- All shackles meet or exceed Federal Specification RRC-271D
- Working Load Limit and traceability codes shown as permanent marking on body and pin
- Available in powder coated, galvanized and self-colored finishes
- All shackles have alloy quenched and tempered pins
- Shackles made from technically advanced microalloy material
- Load break tests consistently show microalloy outperforms quenched and tempered carbon material
- Shock load testing of assemblies at -30°F consistently demonstrate microalloy outperforms quenched and tempered carbon material*
- Shackles exhibit extreme deformation before failure*
- Special testing and certification including magnetic particle, proof load, and fatigue test available upon request at time of order
- Special products engineering available to fit your special lifting, tie down, and pulling needs
- Design factor 6:1 (Round pin shackles design factor 5:1)

CM Carbon Anchor Shackles

Screw Pin

Round Pin

Bolt & Nut

- These shackles meet requirements of Federal Specification RR-C-271D Amendment 1
- All shackle pins are forged from alloy steel, heat treated and tempered to give greater strength
- All shackles are marked with size (inches and millimeters) and working load limit in tons
- Ultimate strength equals 5 times working load limit
- All bolt, nut & cotter shackles have thread protected ends
- Galvanized per ASTM A153
- Standard industry tolerances apply
- Design factor 5:1

Carbon Web Sling Shackle

- Finish: hot dip galvanized
- Linch pin (zinc plated) as shown furnished as standard-cotter or hair pin can be furnished on special order
- Shackle body: carbon steel, heat treated
- Shackle pin: alloy steel, heat treated
- Tolerances: 11/32" unless otherwise indicated
- Design ultimate strength equals 4 times the working load limit

Alloy Web Sling Shackle

- Web Sling Shackles can be used on web slings from 3 to 6 inches in width
- Utilize a bolt and nut with linch style pin to secure the assembly in place
- All shackles are galvanized for longer life
- Marked with working load limit (WLL) and size

CM Trawling Shackle

Load rated trawling chain shackles are used for various applications, such as on trawl doors, the rigging of nets, and areas where critical loads are applied.

- Heat treated bodies
- Heat treated alloy pins
- Square head pins for convenience in wrench tightening and loosening
- Proof load 2.2 times working load limit
- Ultimate strength 6 times working load limit
- Durable orange powder coat finish

DNV Shackles

- Assembly consists of shackle body, bolt, nut & cotter
- Galvanized coating for protective finish
- Certified to meet DNV standard 2.7-1 Offshore Containers
- Assemblies comply with DNV rules for lifting appliances
- Exceeds Charpy V impact strength of ASTM A952 42J at 20°C (31 ft-lb at -4°F)
- Each shackle is serialized individually and batch coded for complete traceability of material and manufacturing
- Certification of compliance supplied with each shipment
- Shackles are 100% proof tested at the manufacturing facility at 2x WLL
- Designed for use with chain, wire rope, and synthetic slings
- Designed factor of 5:1 or higher in accordance with DNV 2.7-1 requirements

DNV Master Sub Assemblies

- Made from Superior Triple Alloy Steel
- Galvanized coating for protective finish
- Certified to meet DNV standard 2.7-1 Offshore Containers
- Exceeds ASTM A952 specification for lifting components
- Exceeds Charpy V impact strength of ASTM A952 42J at 20° C (31 ft-lb, at -4°F)
- Welds exceed Charpy V impact strength of 27J at -20°C (20 ft-lb, at -4°F)
- Each link is serialized individually and batch coded for complete traceability of material and manufacturing
- Certification of compliance supplied with each shipment
- Links are 100% proof tested at the manufacturing facility at 2x WLL
- Designed for use with chain, wire rope, and synthetic slings
- Designed to meet ASME B30.9 requirements
- Design factor of 5:1 or higher in accordance with DNV 2.7-1 requirements.
- Suitable for use at -50°F (-46°C)
- Available in sizes from 1-1/4" to 2" diameter - other sizes available upon request
- WLL from 16 - 45 metric ton

Chain Comparison

CM offers a wide range of welded chains. All chains meet or exceed requirements of NACM & ASTM standards. All chain is proof tested to insure you get the highest quality chain in the market. Listed below you will find a summary of chain specifications, which can be used as a comparison when selecting the chain for your application. Only Herc-Alloy 1000 or Herc-Alloy 800 chain should be used for overhead lifting.

Chain Size	Wire Diameter Nominal	Inside Length Nominal	Inside Width Nominal	Weight Per 100 ft.	Working Load Limit
Herc-Alloy 1000 (Grade 100)					
in.	in.	in.	in.	lb.	lb.
7/32	0.218	0.676	0.312	44.3	2,700

The life and strength of Herc-Alloy 1000 chain slings depend on proper inspection, maintenance and use. For additional information, refer to ASME B30.9 and OSHA 1910.184.

Care

- Chain requires careful storage and regular maintenance.
- Store chains on an A frame in a clean, dry place.
- To avoid corrosion, oil chains before prolonged storage.
- Do not heat Herc-Alloy 1000 chain; this will alter its thermal treatment.

Use

To protect both operators and materials, observe these precautions when using chain slings:

- Before use, inspect chain and attachments following the instructions under "Inspection" below.
- Do not exceed working load limit. Any of the factors listed here can reduce the load the chain will hold:
 - Acceleration in rate of load application can produce dangerous overloads.
 - Variations in the angle of the load to the sling, will change the WLL, please refer to the chart on page 22 for proper WLL.
 - Twisting, knotting or kinking, subjects links to unusual loading, decreasing the working load of the sling.
 - Use for purposes other than those for which slings are intended, can reduce the working load of the sling.
- Free chain of all twists, knots and kinks.
- Center load in hook(s); hook latch must not support load.
- Avoid sudden jerks when lifting or lowering load.
- Balance all loads; avoid tipping of loads.
- Use pads around sharp corners.
- Do not drop load on chains.
- Match the size and working load limits of attachments such as hooks and rings to the size and working load limits of the chain.
- For overhead lifting, use only alloy chain and attachments.

Inspection

It is important both to inspect chain slings regularly and to keep a record of all chain inspections. Follow this guide for such an inspection system.

- Before inspecting, clean chain with a non-acid/non-caustic solvent so that marks, nicks, wear and other defects are visible.
- Inspect each link for these conditions:
 - Twists and bends.
 - Nicks or gouges.
 - Excessive wear at bearing points
- Stretch
- Distorted or damaged master links, coupling links or attachments, especially spread in throat opening of hooks.
- Mark plainly with paint each link or attachment showing any of the conditions listed here to indicate rejection; remove from service until properly repaired.

Wear Allowances of Herc-Alloy1000 Chain

Measure cross section at link ends to determine wear. If chain is worn to less than the minimum allowable thickness, remove from service.

Chain Size		Minimum Allowable Thickness (T)	
in.	mm	in.	mm
7/32	5.5	0.189	4.8
9/32	7.0	0.239	6.1
3/8	10.0	0.342	8.7
1/2	13.0	0.443	11.3
5/8	16.0	0.546	13.9
3/4	20.0	0.687	17.5

CM Chain Inspection Programs

CM provides chain users with a wide range of informative materials and instructive programs on chain and chain inspection. Our colorful chain safety poster/chart and our fact-filled booklet, "CM Lifting, Pulling & Binding Products Manual PMC-10," are available on request.

Use of Chain & Components Under Extreme Temperature Conditions

When the chain itself is subjected to temperatures shown here, working load limits should be reduced as indicated.

		Reduction of Working Load Limit	
Temperature		While at Temperature	After Exposure to Temperature
°F	°C		
Below 400	Below 204	None	None
400	204	15%	None
500	260	25%	5%
600	316	30%	15%
700	371	40%	20%
800	427	50%	25%
900	482	60%	30%
1000	538	70%	35%

The identification tag found on each chain sling contains this information:

- Grade • Size • Reach • Serial Number • Number of Legs
- Working Load Limit (at a specific angle of lift)

- Meets or exceeds many national and international standards
- 25% higher working load limit when compared to Grade 80
- Environmentally friendly gray coating for distinct appearance, ease of identification
- Certification included with every drum
- 100% proof tested

Chain Size	Working Load Limit	Chain Part #	Nominal Chain Dimensions			Approx. Weight	Approx No. Of Links	Drum

How to Select and Order the Proper Chain Sling

1. Determine the weight and configuration of the load(s) to be lifted.
2. Determine the type of chain sling required, according to weight and configuration.
3. Determine the size of the body chain according to the working load limits. Be sure to take into consideration the effect of the required angle. The working load limit is the maximum load in pounds which should ever be applied in direct tension to a straight length of chain.
4. Determine the reach required to give the desired angle. The reach is measured from the upper bearing surface of the master link to the bearing surface of the lower attachment. If chain slings are to be used in pairs and are to be matched for reach, please indicate when ordering.

HERC-ALLOY® Slings

1000

Types of Chain Slings

In describing the type, the following symbols should be used if attachments are other than standard, give detail specifications.

First symbol (basic type)

- S** Single chain sling
- C** Single choker chain sling with a standard end link on each end, no hook
- D** Double branch chain sling (2 legs)
- T** Triple branch chain sling (3 legs)
- Q** Quad branch chain sling (4 legs)

Second symbol (type of master link or end link)

- O** Oblong master link of standard dimensions

Third symbol (type of hook)

- S** Sling hook
- G** Grab hook
- F** Foundry hook
- L** Latchlok 100 hook

Additional coding is defined as follows

- AS** Adjustable single
- ES** Endless single
- SAL** Single adjustable loop
- AD** Adjustable double
- SB** Single basket
- ED** Endless double
- DAL** Double adjustable loop
- DB** Double basket

SLING CONFIGURATION	Single (1 Leg)		Double (2 Legs)			Triple (3 Legs)			Quad (4 Legs)

DO NOT USE AT ANGLES SMALLER THAN 30°

Single Adjustable

Double Adjustable

Adjusters on sling allow for easy and safe take up of chain when applications require shorter leg lengths, or when lifting objects of abnormal sizes. Specialty chain slings can be manufactured to suit your specific lifting applications.

3/4	61,100	91,700	35,300	61,600

DO NOT USE AT ANGLES SMALLER THAN 60°

American National Standard ANSI B30.9, the National Association of Chain Manufacturers (NACM) and the Occupation Safety & Health Administration (OSHA) recommend only the use of alloy steel chain for overhead lifting, i.e. sling chain. Slings may be constructed by the user using Herc Alloy chain, Herc Alloy 1000 or Herc Alloy 800 chain and attachments.

CM Alloy chain slings are provided with a durable metal identification tag. The tag is typically affixed to a master coupling link and contains the following data:

- Size of sling
- Reach of sling
- Working load limit at 90° on a single and 60° from horizontal on multi-leg slings
- Serial number
- Columbus McKinnon (Manufacturer's name) and grade of sling
- Number of branches

HERC-ALLOY® Components 1000

Columbus McKinnon is a leader in the Overhead Lifting Industry. Since trade marking Herc Alloy in 1936, we have continued to add overhead lifting products as required by the industry. Trademarked products such as Herc-Alloy chain, Clevlok hooks and Hammerlok couplers represent a few of the most-recognized and widely-used products in the industry. From master links to eye hooks, we have lifted the industry to new heights with the introduction of Herc-Alloy 1000. We have one of the most comprehensive lines of high grade overhead lifting chain and attachments in the industry. All our products are made by Columbus McKinnon to assure form and fit.

Herc-Alloy 1000 - a vital part of “CM Complete Lifting Systems” From Beam.....to Hoist.....to Below the Hook

HERC-ALLOY® Master Link & Sub-Assemblies

1000

Master Link

- Designed to accept Herc-Alloy 1000 chain and components
- Durable gray powder coated finish
- May be used for mechanical and welded sling assemblies
- 100% proof tested

HERC-ALLOY® Chain Shortener & Rigging Hook 1000

Chain Shortener

- Quickly and easily adjust chain length of sling when the load has uneven pick points
- Durable gray powder coated finish
- Marked with both fraction and metric sizes
- Forged alloy steel - quenched & tempered
- Mechanically attaches directly to master ring

Clevlok Sling Hook

- Fraction and metric markings
- Fatigue rated to Grade 100 specifications
- Fits Grade 80 and Grade 100 chain
- New "I" beam body
- 100% proof tested
- Durable gray powder coated finish
- Improved forged latch
- New CE compliant hooks and latches
- Meets EN 1677

HERC-ALLOY® Grab Hooks 1000

Clevlok Cradle Grab Hook

- Fits grade 80 and grade 100 chain
- Fraction and metric markings
- New "I" beam body with chain cradle saddle
- 100% proof tested
- Fatigue rated to grade 100 specifications
- Durable gray powder coated finish

Grade 100	5/8	22,600		18,080	
Round Sling (Vertical)	#5 Red	16,500		13,200	
Round Sling (Vertical)	#6 White	21,000		16,800	
Wire Rope (EIP) max.	7/8	19,900		15,920	

- Do not apply load unless latch and hook are completely closed and locked
- Make certain that the latch does not support any part of the load
- When lifting, make certain that the load is firmly seated in the base (bowl) of the hook
- Inspect hook and latch periodically. If the hook or latch is damaged or if the latch fails to interlock with the tip, the hook should be removed from service
- Do not exceed the working load limit
- Do not use if the hook is visibly distorted, damaged or worn
- Keep body and other objects clear of the latch when closing to avoid the pinch point
- Do not side load or tip load hook
- User should be properly trained and understand safe rigging practices

WLL (Working Load Limit) is the maximum load a product is designed to support during use

The life and strength of Herc-Alloy 800 chain slings depend on proper inspection, maintenance and use. For additional information, refer to ASME B30.9 and OSHA 1910.184.

Care

- Chain requires careful storage and regular maintenance.
- Store chains on an A frame in a clean, dry place.
- To avoid corrosion, oil chains before prolonged storage.
- Do not heat Herc-Alloy 800 chain; this will alter its thermal treatment.

Use

To protect both operators and materials, observe these precautions when using chain slings:

- Before use, inspect chain and attachments following the instructions under "Inspection" below.
- Do not exceed working load limit. Any of the factors listed here can reduce the load the chain will hold:
 - Acceleration in rate of load application can produce dangerous overloads.
 - Variations in the angle of the load to the sling, will change the WLL please refer to the chart on page 38 for proper WLL.
 - Twisting, knotting or kinking, subjects links to unusual loading, decreasing the working load of the sling.
 - Use for purposes other than those for which slings are intended, can reduce the working load of the sling.
- Free chain of all twists, knots and kinks.
- Center load in hook(s); hook latch must not support load.
- Avoid sudden jerks when lifting or lowering load.
- Balance all loads; avoid tipping of loads.
- Use pads around sharp corners.
- Do not drop load on chains.
- Match the size and working load limits of attachments such as hooks and rings to the size and working load limits of the chain.
- For overhead lifting, use only alloy chain and attachments.

Inspection

It is important both to inspect chain slings regularly and to keep a record of all chain inspections. Follow this guide for such an inspection system.

- Before inspecting, clean chain with a non-acid/non-caustic solvent so that marks, nicks, wear and other defects are visible.
- Inspect each link for these conditions:
 - Twists and bends.
 - Nicks or gouges.
 - Excessive wear at bearing points.
- Stretch.
- Distorted or damaged master links, coupling links or attachments, especially spread in throat opening of hooks.
- Mark plainly with paint each link or attachment showing any of the conditions listed here to indicate rejection; remove from service until properly repaired.

Wear Allowances of Herc-Alloy 800 Chain

Measure cross section at link ends to determine wear. If chain is worn to less than the minimum allowable thickness, remove from service.

Chain Size		Minimum Allowable Thickness (T)	
in.	mm	in.	mm
7/32	5.5	0.189	4.8
9/32	7.0	0.239	6.1
3/8	10.0	0.342	8.7
1/2	13.0	0.443	11.3
5/8	16.0	0.546	13.9
3/4	20.0	0.687	17.5

CM Chain Inspection Programs

CM provides chain users with a wide range of informative materials and instructive programs on chain and chain inspection. Our colorful chain safety poster/chart and our fact-filled booklet, "CM Lifting, Pulling & Binding Products Manual PMC-10," are available on request.

Use of Chain & Components Under Extreme Temperature Conditions

When the chain itself is subjected to temperatures shown here, working load limits should be reduced as indicated.

Temperature		Reduction of Working Load Limit	
		While at Temperature	After Exposure to Temperature
°F	°C		
Below 400	Below 204	None	None
400	204	10%	None
500	260	15%	None
600	316	20%	5%
700	371	30%	10%
800	427	40%	15%
900	482	50%	20%
1000	538	60%	25%

The identification tag found on each chain sling contains this information:

- Grade • Size • Reach • Serial Number • Number of Legs
- Working Load Limit (at a specific angle of lift)

Chain Size	Working Load Limit	Chain Product Code	Nominal Chain Dimensions			Chain Weight	Approx No. Of Links	Drum Data

How to Select and Order the Proper Chain Sling

1. Determine the weight and configuration of the load(s) to be lifted.
2. Determine the type of chain sling required, according to weight and configuration.
3. Determine the size of the chain according to the working load limits. Be sure to take into consideration the effect of the required angle. The working load limit is the maximum load in pounds which should ever be applied in direct tension to a straight length of chain.
4. Determine the reach required to give the desired angle. The reach is measured from the upper bearing surface of the master link to the bearing surface of the lower attachment. If chain slings are to be used in pairs and are to be matched for reach, please indicate when ordering.

HERC-ALLOY® Slings

800

Types of Chain Slings

In describing the type, the following symbols should be used if attachments are other than standard, give detail specifications.

First symbol (basic type)

- S** Single chain sling
- C** Single choker chain sling with a standard end link on each end, no hook
- D** Double branch chain sling (2 legs)
- T** Triple branch chain sling (3 legs)
- Q** Quad branch chain sling (4 legs)

Second symbol (type of master link or end link)

- O** Oblong master link of standard dimensions

Third symbol (type of hook)

- S** Sling hook
- G** Grab hook
- F** Foundry hook
- L** Latchlok 100 hook

Additional coding is defined as follows

- AS** Adjustable single
- ES** Endless single
- SAL** Single adjustable loop
- AD** Adjustable double
- SB** Single basket
- ED** Endless double
- DAL** Double adjustable loop
- DB** Double basket

	Single (1 Leg)	Double (2 Legs)			Triple (3 Legs)			Quad (4 Legs)

Columbus McKinnon is a leader in quality and manufacturing excellence. With over 130 years of material handling experience, we strive for superior customer service in all aspects of our business. Columbus McKinnon pioneered the welding of Herc-Alloy over 70 years ago, and we continue to upgrade our process with the latest in technology and mechanical equipment. We are the original designer of the mechanical coupler link, trademark Hammerlok, as well as the Clevlok style hook for overhead lifting slings. From beam to hoist to below the hook attachments, the product offering that represents CM Complete Lifting Systems is unparalleled in the industry. Additionally, diverse training programs in the areas of rigging, applications, safety, and service are components of the package available to users and distributors when they purchase CM products.

Chain and forge divisions are ISO certified companies, and a direct, highly trained, sales force provides expertise in numerous areas. All rigging products from chain to master links to forged attachments are produced in Columbus McKinnon facilities, thus ensuring form and fit.

Clevlok Sling Hook

- Available with and without a latch
- Quench and tempered alloy steel
- CM's clevlok head design
- 100% proof tested fatigue rated
- Durable orange powder coated finish
- Replacement pin and latch kit available
- Improved forged latch
- New CE compliant hooks and latches
- Meets EN 1677

Shank Hooks

- Heat treated alloy steel provides a strength without bulk or weight
- Pre drilled boss allows for latch
- Shank hooks are supplied unthreaded. Insufficient thread engagement can result in loss of load.

The following should be observed:

1. Shanks are not intended for internal threading or swaging
2. To obtain maximum strength threads should be class 1 or 2
3. Thread engagement in nut or object must be a minimum of 1-1/2 times the thread diameter

†Grade 63

Note: Refer to CM Lifting, Pulling and Binding Manual for the proper use of Grab Hooks in binding applications.

Specialty Hooks

Plate Hook

- Made from alloy material
- Designed to handle plate steel
- Durable orange powder coated finish
- Available as components or attached to certified slings

Stainless Steel Chain

- Made from 300 series stainless
- Higher temperature resistance than HA 800
- Safely used in the food handling industry
- Available components to build single and double slings
- Less corrosive than standard alloy material

Chain Size	Working Load Limit	Product Code	Nominal Dim.			Approx. # of Links	Weight
			Material Diameter A	Inside Length B	Inside Width C		
in.	lb.		in.	in.	in.		lb.
9/32	2,000	646028	0.281	0.868	0.415	13.8	0.74
3/8	3,550	646037	0.394	1.222	0.580	9.8	1.45
1/2	6,500	646050	0.512	1.404	0.740	8.5	2.58

Wear Allowances of Stainless Steel

Measure cross section at link ends to determine wear. If chain is worn to less than the minimum allowable thickness, remove from service.

Chain Size		Minimum Allowable Thickness (T)	
in.	mm	in.	mm
9/32	7	0.239	6.1
3/8	10	0.342	8.7
1/2	13	0.443	11.2

Use of Chain & Components Under Extreme Temperature Conditions

When the chain itself is subjected to temperatures shown here, working load limits should be reduced as indicated.

		Reduction of Working Load Limit	
Temperature		While at Temperature	After Exposure to Temperature
°F	°C		
Below 400	Below 204	None	None
400-800	204-426	10%	None
801-1000	427-537	20%	None
1001-1200	538-649	30%	None
1201-1300	650-704	40%	None
1301-1400	705-760	50%	None
1401-1500	761-815	60%	None
1501-1600	816-871	75%	None

Stainless Steel Master Link

- Made from 300 series stainless
- Retains strength in high temperatures
- Designed to be used with stainless steel chain
- 100% proof tested

Trade Size	Working Load Limit	Product Code	Nominal Dim.			Weight
			Material Diameter A	Inside Length B	Inside Width C	
in.	lb.		in.	in.	in.	lb.

HERC-ALLOY® 800

Heavy Duty Tiedowns

- Meets FMCSA, CVSA tiedown requirements
- Made from high quality alloy steel
- Domestic attachments made by CMCO
- Can not be used for overhead lifting
- Lighter weight than most transport binder chains
- Does not degrade in ultra-violet light
- Permanent identification on chain and attachments
- Made to order assemblies available in 3 days or less

G70 Welded Assembly

- Meets FMCSA, CVSA, DOT requirements
- Available in custom built lengths
- Assemblies are available with your choice of end attachments
- Assemblies are available with mechanical or welded attachments
- Welded assemblies are proof tested after welding.
- Full line of lever and ratchet binders to accommodate binder chain offering

Recovery J Hook Assemblies

- Patented I beam profile towing 15" Clevlok Alloy J Hook
- Clevlok style head, no catch points
- Patented nose design reduces hook slippage on chain
- Load rest reduces load rolling out of hook bowl (load must be behind rest)
- Designed for the professional towing
- G80 Proof Loaded Assemblies
- All mechanical connections... no welded links

Transport Chain Towing Attachments

Mini “J” Hook

- Designed specifically for the towing and transport industry
- Designed for use with 5/16” grade 70 chain
- Not to be used with 1/4” chain
- Combinations available for all tie down needs
- Finishes available are yellow chromate, Self colored and zinc plated
- Not for overhead lifting

Size	Working Load Limit (grade 70)	Product Code (Yellow Chromate)	Product Code (Zinc)	Dimensions						Weight

“J” Hook

- “I Beam” construction offers greater strength with less weight and a wider bowl for stability
- Larger tip to help prevent hook from tip loading or slipping off
- Forged in USA
- Available in self colored, zinc plated, yellow chromate, and powder coated finishes
- Not for overhead lifting

Lever Type Load Binder

- All components are forged, no cast parts
- Forged binders are lighter and stronger than cast binders
- Under equal force a forged handle will yield and bend while a cast handle may break

Claw Hook Load Binder

Load binder operating instructions

1. Follow D.O.T. Federal Motor Carrier Safety Regulations S 392.9, S 393.100, and S 393.102
2. Inspect before use. Replace worn and deformed binders. Lubricate pivot and swivel points for optimum performance.

3. Do not operate with anyone on load.
4. Always apply lever binder in straight line hook to hook manner without bending and such that handle goes down when securing load.
5. Tighten binders before moving and recheck frequently.
6. Do not exceed working load limit shown on binder - hand effort will tighten binder to working load limit.
7. Do not use cheater bar or handle extension as their use can overload binder system and result in injury.
8. Secure handle down with a positive retaining method.
9. Release handle/load with extreme care. Make sure everyone is clear. Lever binder handle can snap back over center. Use open palm under handle and push up.

3/8	3/8	Special Order	6,600	4.50	16.62	2.02

⚠ WARNING ⚠

Load binding systems store energy which can release suddenly

To avoid injury:

Operate only by hand from a firm standing position. Operate handle cautiously. Stay clear of handle path: handle may release suddenly. Follow instructions.

Ratchet Type Load Binder

- Each ratchet component is forged from pure alloy steel
- Handle is designed loose using self-locking one-way bolts allowing easy removal of unwanted debris such as mud, snow or ice
- Proof tested to 50% of the minimum breaking strength
- Gears are permanently welded to the barrel

⚠ WARNING ⚠

Load binder systems store energy which can release suddenly

Specialty Forged Lever Load Binder

- **DIXI-LOC (48385)** binders provide extra security by allow the binder to be locked in closed position using a pad lock, linch pin or bolt.
- **COMPRESSION BINDERS (48758 & 48395)** are designed for securing bar and rod steel, lumber, poles and machinery with rubber tires.
- **EZ GRAB (48325)** is a military style binder designed to use the handle leverage to remove slack from the chain before hook-up, achieving correct tension on the first try.

⚠ WARNING ⚠

Load binder systems store energy which can release suddenly

“E-Z Pro” Cam Release Lever Binder

48405

48406

- Binder releases effortlessly without the use of any tools or prying
- Free turning, 360° continuous swivel action in both tongue and clevis for enhanced straight line pull.
- Highly visible yellow paint finish

Size			Product Code	Working Load Limit	Take Up	Handle Length	Weight
G30	G43	G70					
in.	in.	in.		lb.	in.	in.	lb.
3/8	3/8	5/16	48405	5,400	4.75	16.62	9.0
1/2	1/2	3/8	48406	9,200	4.75	16.62	9.8

Low energy release binder allows you to release the binder effortlessly, without using any tools or prying. It can actually be released under load with one finger! Due to it's unique design, the handle releases the load at the same point every time, when the handle is at the 12 o'clock position.

Carbon Chain Chain & Assemblies

G43 Chain

Gr-43, commonly called High Test, is manufactured to meet ASTM & NACM specifications. Typical uses include container securement, logging, towing, and marine industry. Gr-43 is available in many finishes and package configurations. "Gr-43 is not to be used for overhead lifting".

- Meets ASTM & NACM standards
- Available in a wide assortment of finishes including, Self Colored, Burnished, Zinc Plated, Galvanized
- 50% stronger than Gr-30 Chain
- Permanent identification on chain
- 100% proof tested
- Available in drums, pails, multiple style of assemblies

G30 Chain

Gr-30, commonly called Proof Coil, is manufactured to meet ASTM & NACM specifications. Typical uses include barrier chains, trailer safety chains, light construction, marine industry, etc. Gr-30 is available in a wide assortment of finishes and packaged configurations. "Gr-30 is not to be used for overhead lifting".

- Meets ASTM & NACM standards
- Available in a wide assortment of finishes including, Self Colored, Burnished, Zinc Plated, Galvanized, Powder Coated
- Permanent identification on chain
- 100% proof tested
- Available in drums, pails, multiple style of assemblies

Carbon Chain G30 Slip Hooks

G30 Clevis Slip Hook

- Designed to be used with grade 30 chain
- Heat treated pins
- Hooks are heat treated and tempered
- Hooks are embossed with chain grade, fraction size and country of origin (USA)
- Hooks embossed with a trace code
- Ultimate strength equals 4 times the working load limit, matching NACM specifications
- Not to be used for overhead lifting

Specialty Chain

Sash Chain

- Meets or exceeds ASTM & NACM standards where applicable
- Available in various finishes
- Sold by carton, reel or pails
- Custom cuts for OEM applications are available

Typically uses for sash chain are pulley applications in windows and window sashes.

Specialty Chain Mining Chain

To meet the specific needs of the mining industry, Columbus McKinnon Corporation manufactures high specification mining chain and components for Long Wall applications. From chain to sprockets, to connectors, we have the hardware to keep the product moving. Chain and components are all made by CM, assuring form and fit of each piece.

Combining the long wall product line with our other products, we have one of the most comprehensive offerings in the market for your mining applications.

Long Wall Mining Chain

- Available in carburized and thru hardened
- CM carburized chain is processed with the latest technology to provide excellent strength and wear properties
- CM thru hardened chain yields exceptional strength properties
- Wide assortment of attachments to accommodate chain
- Chain is calibrated to assure fit when assembling assemblies
- Match pairs in various lengths are available
- All chain and components are built by CM to insure form and fit

Wire Rope Attachments

Swage Socket (open)

- Forged from fine grain, special bar quality C-1035 steel
- Spheroidized annealed for cold swaging
- Recommended for use on 6" x 19" or 6" x 37" IWRC regular lay wore ropes. Can also be used on galvanized bridge rope. NOT FOR USE ON FIBER CORE OR LANG LAY ROPES
- Sockets have 100% efficiency rating based on catalog strength of wire rope when properly applied

Wire Rope Attachments

Swaging Sleeve for Flemish Eye

- Carbon steel sleeves come with unique color change quality control feature- color changes intensity once sleeve has been pressed verifying that swaging has occurred
- Zinc plating extends shelf life and resists rusting
- Color coding helps determine size and simplifies inventory
- Seamless construction
- Fits standard industry dies
- Mill certified, annealed low carbon steel provides consistent swaging without cracking
- No need for 16th size dies - O.D. of 16th sizes same as next largest sleeve size

Mid-Grip Clips (Double Saddle)

- Meets or exceeds FF-C-450 specifications, Type III, Class 1 and will provide maximum holding strength
- Allow full arc wrench swing for quicker installation, retightening or disassembly of nuts
- Forged from special quality steel with sizes clearly marked on the saddle
- Galvanized with galvanized heavy hex nuts
- Furnished unassembled in poly bags and in factory packs of 20

Proper use of Mid-Grip Clips

1. Refer to chart above in following these instructions. Turn back specified amounts of rope from thimble or loop. Apply first clip one base width from dead end of rope. Tighten nuts evenly, alternating from one nut to the other until reaching the recommended torque.
2. When two clips are required, apply the second clip as near the loop or thimble as possible. Tighten nuts evenly, alternating until reaching the recommended torque. When more than two clips are required, apply the second clip as near the loop or thimble as possible, turn nuts on second clip firmly, but do not tighten. Proceed to step 3.
3. When three or more clips are required, space additional clips between first two - take up rope slack - tighten nuts on all clips, alternating from one nut to the other until reaching the recommended torque.
4. Apply an initial load equal to loads expected in use. Inspect for proper spacing and retighten the nuts to the recommended torque.

Refer to additional notes concerning wire rope clips on next page

Proper use of Wire Rope Clips

1. Refer to the chart above in following these instructions. Turn back specified amount of rope from thimble or loop. Apply first clip one base width from dead end of rope. Apply U-bolt over dead end of wire rope - live end rests in saddle. Tighten nuts evenly, alternate from one nut to the other until reaching the recommended torque.
2. When two clips are required, apply the second clip as near the thimble or loop as possible. Tighten nuts evenly, alternating until reaching the recommended torque. When more than two clips are required, apply the second clip as near the loop or thimble as possible, turn nuts on second clip firmly, but do not tighten. Proceed to Step 3.
3. When three or more clips are required, space additional clips equally between the first two - take up rope slack - tighten nuts on each U-bolt evenly, alternating from one nut to the other until reaching the recommended torque.
4. Apply an initial load equal to loads expected in use. Inspect for proper orientation and spacing of clips and retighten the nuts to recommended torque.

⚠ WARNING ⚠

Improper installation and use of wire rope clips can result in injury.

To avoid injury:

Install and use only as instructed herein.

Proper use of PiggyBack Wedge Socket Clips

1. Dead end wire rope tail length should be at least 6 rope diameters, but not less than 6 inches beyond the wedge socket. Figure 1.
2. Apply U-bolt and first saddle on dead end rope and the second saddle on live end rope. Install nuts. Figure 1 & 2
3. Position the dual saddle clip so that 3 to 4 inches of dead end rope remain beyond the clip. Figures 1 & 2.
4. Tighten nuts evenly. Alternate tightening each nut until reaching the required torque specified. Figure 2.
5. Check that clip does not pinch or clamp the live wire rope. Apply an initial test load equal to the loads expected in regular use. Be certain rope is secured properly in the wedge socket prior to any use.
6. Inspect for proper rope alignment with wedge socket and retighten the nuts to the specified torque.

Hoist Rings

Heavy Duty Hoist Ring

- Forged
- Pivots 180° and swivels 360° simultaneously
- Back and side pins constructed of one piece of forged alloy steel
- 100% magnetic particle inspected
- Bale and center body are closed die forged to assure superior grain flow and consistent dimensional accuracy
- Large bale allows use of a variety of hook sizes

⚠ WARNING ⚠

Improper installation and use of hoist rings can cause injury

To avoid injury:

- Do not exceed rated load.
- Install rings per instructions. Verify full 360° seating - Retorque periodically.
- Consult angular lifting graph when lifting at other than 90°.

Specialty Engineered Hoist Ring

- Machined
- Pivots 180° and swivels 360° simultaneously
- Bale and shoulder pin machined from alloy steel
- Patented design provides shoulder pin retention with specialized clip
- Easily disassembled for periodic non-destructive inspection
- Special available in stainless steel and metric sizes

Angular Lifting Graph

Effect of Hoist Ring Angle on Load

INSTALLATION INSTRUCTIONS: Drill and tap workpiece for hoist ring screw with axis vertical to mounting surface. Work surface should be flat and smooth to provide full 360° flush seating for the bushing flange. (SAFETY NOTE: Some loosening may develop after prolonged service in a permanent installation. It is advisable to periodically re-tighten the mounting screw to maintain the specified torque value.) The use of free fit spacers between the bushing flange and mounting surface is not recommended as this will reduce the safe load rating on angularly applied loads. Hoist ring must be free to swivel 360° and pivot 180° at all times.

Hoist Ring Swivel

- Hoist Rings are heat treated
- 6:1 design factor
- Screws are not included

1-1/2	456929	21,000	2.500	3.500	9.49	1 1/2 - 6	7.77

lb.Note:

- Do not exceed the working load limit - reduce the working load limit according to the adjacent table if loading other than true vertical. Inspect eyebolts before use. Do not use if bent more than 15° or if wear of more than 10% of original dimension is evident.
- Install with shoulder at 90° to axis of hole to assure total contact of shoulder. Torque nut/eyebolt to assure proper seating. Check seating after initial loading.
- If installing in tapped hole, make sure depth of thread engagement is at least 1-1/2 times bolt diameter. Thread fit must also be good-tight, not loose-sloppy.
- Where eyebolts must be aligned, a washer or shim may be placed under the shoulder to permit alignment when tightened.
- To minimize the bending movement, always apply load in the direction of the plane of eye. Reduce working load limit according to table if loading other than true vertical
- Never insert a hook tip in an eyebolt to load.
- Do not use a sling reeved through an eyebolt or a pair of eyebolts using a shackle.

If in doubt, consult a rigging handbook or discuss with a qualified person

Rigging Hook

- Built in distortion detectors
- Load rating marked on each hook body
- Design factor 5:1
- Pre-drilled latch tab allows addition of latch
- Carbon hooks have a clear protective coating to resist rust and for cleaner handling (use suffix "C" when ordering carbon clear finish, use suffix "G" when ordering hot dip galvanized)

Swivel Rigging Hook

- Design factor 5:1
- Pre-drilled for latches
- Hook and latch assemblies furnished separately
- Powder coated orange
- Carbon swivel hooks are technically advanced Micro-alloy which requires no secondary heat treat
- Alloy swivel hooks are heat treated quenched and tempered

CP Pile Pitching Clamp

- Designed specifically for pitching sheet steel piling
- Perfect designed clamp for heavy construction
- Rope is fitted for easy release from the ground
- These are not designed to extract driven piles, use the PP series clamps for this

*These clamps are not designed to extract a driven pile and must NOT be used for this under and circumstance.

⚠ WARNING ⚠

Improper installation and use of clamps can cause injury

If not properly installed, operated and maintained, the use of all mechanical equipment presents the possibility of personal injury or property damage. Before using lifting clamps, become familiar with applicable installation, operation and maintenance requirements. Clamps should be used only by authorized, properly trained operators.

To avoid injury:

- Inspect clamps and equipment before use. Do not use if components are bent, elongated, gouged, nicked excessively, worn, or damaged. Make sure that nut, bolts, pins and other fasteners are tightened and secure. Make sure clamps are functional and will grip the load.
- Do not exceed the clamps' rated load or working load limit of other lifting equipment components.
- Lift only one plate at a time when using lifting clamps.
- Do not lift unbalanced loads. Avoid sudden jerks when applying the load. Rapid load application can produce overloading.
- Use clamps and lifting equipment only if authorized and properly trained.
- Always stand clear when lifting and lowering.
- Use more than one clamp suspended from a lifting beam when lifting long loads.
- Always gently lift and lower.

Cady Lifters

Cady Lifters represents a complete line of below the hook attachments for efficiently handling goods in industrial, construction, and related environments. The Cady team of welders conform to the Structural Welding Code of the American Welding Society, thus ensuring the consistency of the products manufactured. All products conform to the requirements of ANSI/ASME B30.20 for Below-the-Hook Lifting Devices.

In addition to the standard products shown here, custom solutions exist to satisfy the most challenging lifts. Products such as tongs, scissors, and grabs may be tailored to the exact application.

Crane Forks

Crane forks are ideal for handling palletized loads in areas such as loading docks, crowded or unpaved storage areas, and railroad yards. They are also used frequently to load barges, gondolas, and open top trucks.

All Cady crane forks are counter balanced to hang level when empty and to increase the rate of handling. Counterweight balances the lifter structure only, not the load. The load is centered under the lifting bail for a level lift.

Capacity 1 to 20 tons

C-Hooks

C-Hooks are available in a variety of styles. Compact C-Hooks are rugged, yet lightweight for easy handling. The polished, large radius inside corners of the compact C-Hooks minimize stress concentration in these critical areas. These inside corners are positioned to avoid contact with coil edges, thus reducing coil damage. Additionally, the curved saddle on the lower arm reduces wear on the coil.

In addition to the popular Compact C-Hooks, the following are part of the Cady Lifters line:

Close Stacking C-Hooks – contains a short upper arm that permits handling a large range of coil sizes flush against a vertical surface. This arm also allows the user to handle all coils in a range without interfering with adjacent coils during movement.

Ship Loaders – Designed for use with slings to handle two coils simultaneously. Hooks are easily separated for insertion into coils.

Capacity 5 to 50 tons

Spreader Beams

Lifting beams and spreaders are available in a wide range of capacities and styles. Beams are available in fixed or adjustable styles and may also be designed with special hook or shackle configurations. Low headroom beams are offered with either fixed or movable hooks, and can also be developed for three-point lifts.

⚠ WARNING ⚠

- Inspect lifter, moving lifter parts and operating controls for proper operation before each use. Never use malfunctioning or damaged lifter, or one tagged "Out of Service."
- Do not exceed rated load of lifter and crane.
- Make sure load is balanced and stable.
- Avoid shock loads due to sudden starts and stops.
- Make sure lifting ropes and chains are not twisted or kinked.
- Do not lift people. Make sure operator and others are clear of load at all times.
- Make sure load clears objects during moving.
